DETAILED ACTION

Election/Restriction

1. Applicant's election of Group I, claims 1-13 and 17 in Paper No. 6 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

It is also noted that applicant elected *Pseudomonas* for their species election of claim 11 (Chris Stone by telephone on 7/19/2000) as required by the restriction and election of species requirement of paper number 4.

Since the requirement is proper, it is made FINAL.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 5-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Application/Control Number: 09/435,461 Page 3

Art Unit: 1651

These claims are indefinite since it is not clear what applicant considers to be the "control". This term has no antecedant basis in the claims.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1, 2, 4-13 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Lund et al. (See abstract), JP 05344897 (see abstract), Enomoto et al. (See col. 2, lines 25-66), Petersen (see cols. 1-2), EP 214,761 (see abstract), or EP 476,915 (see abstract and pages 2-3).

Each of the references teach the modification of a polyester with a polyesterase enzyme from *Pseudomonas*. It is deemed inherent that the polyesterase has at least 10-100% greater hydrolysis in a UV and/or a MB assay that a control.

6. Claims 1, 2, 5-13 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Stewart et al.

The reference teaches the modification of a polyester with a polyesterase enzyme from *Pseudomonas*. It is deemed inherent that the polyesterase has at least 10-100% greater hydrolysis in a UV and/or a MB assay that a control.

Application/Control Number: 09/435,461 Page 4

Art Unit: 1651

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the

manner in which the invention was made.

Claims 1-13 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lund

et al. (Lund), JP 05344897, Enomoto et al. (Enomoto), Petersen, EP 214,761, or EP 476,915

taken with JP 52082774.

The primary references are discussed above. They do not teach specifically that the

polyester they are treating is an aromatic polyester.

JP 52082774 teaches that aromatic polyesters are modified by a lipase from

Pseudomonas.

8.

It would have been obvious to one of ordinary skill in the art to use an aromatic polyester

in the methods of the primary references since as taught by JP 52082774, aromatic polyesters are

well known in the art and it is simply the choice of the artisan to use a polyester such as an

aromatic one. Further, since the reference teaches that lipases from Pseudomonas can modify a

polyester, then this provides further motivation to use such a polyester.

Any inquiries concerning this communication should be directed to Examiner Mike

Meller at telephone number (703) 308-4230. If attempts to reach the examiner by telephone are
